Every post leaves a trace

Cyber security · Level 2 · Lesson 1

In this lesson you will

- Tell your active footprint from your passive one.
- Explain why posts are hard to take back.
- Spot details that add up, and test a post before you share it.

Key ideas

- Everything online leaves a trace
- Deleting removes only your copy
- Small details add up
- Try the three-people test

Activity: The puzzle game

1. Warm-up (3 min): List what you posted or shared this week.
2. Sort (5 min): Mark each one active or passive.
3. Puzzle (7 min): Find what six made-up posts give away together.
4. Fix (5 min): Rewrite two posts so they’re safe to share.

You only need paper and a pen. Write six short made-up posts, or use the ones in the Digital footprint lab. Never use real people’s posts.

Let’s discuss

1. Which of your posts would a stranger find most useful?
2. Why doesn’t deleting a post make it disappear?
3. What would you like a future school to find about you?

Exit ticket

- One detail I’ll stop sharing publicly + why.
