Who knows where you are?

Cyber security · Level 2 · Lesson 2

In this lesson you will

- Explain how your phone knows where it is.
- Allow only the permissions an app needs.
- Share live location safely, and keep places out of your photos.

Key ideas

- GPS, Wi-Fi and phone masts
- Ask: does it need it?
- Only while using, approximate
- Live location: family, for a set time

Activity: Permission detective

1. Warm-up (3 min): Guess how many apps can see your location.
2. Check (7 min): Look in Settings and list them.
3. Decide (5 min): Needed, while using, or not needed?
4. Share (5 min): Compare with a partner.

No phone of your own? Do it on a family phone with its owner, or use the four apps in the App permissions lab.

Let’s discuss

1. Which app surprised you most?
2. When is sharing live location a good idea?
3. What could a photo of your street tell a stranger?

Exit ticket

- One permission I switched off + why.
