Lesson notes · for you

Who else is watching?

Cyber security · Level 2 · Lesson 4

Time
20 min

Materials
Your phone, or a family phone with its owner's permission; Paper and a pen

Learning goals

- Explain what a network, a website and a tracker can see.
- Use the padlock, mobile data and settings to share less.
- Say what private browsing does and doesn't do.

Activity: Privacy clean-up

1. Warm-up (3 min): Choose one free app you use every day. Write three things you think it knows about you: where you go, what you like, who your friends are?
2. Check (8 min): Open the app's privacy and ad settings. List what is switched on: ad personalisation, location, who can message you or see your posts, contact syncing.
3. Change (5 min): Turn off at least two things the app doesn't need, with the owner's permission on a family phone. Write down what you changed.
4. Share (4 min): Tell a partner one setting that surprised you, and why you turned it off or kept it.

No phone of your own? Do it on a family phone with its owner, or try the What others see on public Wi-Fi lab.

Discussion

- What can a café owner see when you use their Wi-Fi?
- Why do free apps want your data?
- When is private browsing actually useful?

Check yourself

- One setting I turned off + what it was collecting.

Try it this week
Open the privacy settings of one app you use every day. Turn off one thing you didn't know was on, like ad personalisation or location history, and tell a friend what you found.

Worksheet

Who else is watching?

Cyber security · Level 2 · Lesson 4

Name _____ Class _____ Date _____

1 **On the bus station's free Wi-Fi, which is the safer thing to do?**

◯ Read the football news ◯ Sign in to your email to read a message

◯ Sign in to pay with mobile money

2 **Match each one to what it does.**

The café's Wi-Fi owner	• • • •	Scrambles what you type and read
HTTPS (the padlock)	• • • •	Builds a profile of you for adverts
Private browsing	• • • •	Sees which sites you visit
A tracker	• • • •	Saves no history on this phone

3 **The padlock (HTTPS) means the café's Wi-Fi can't see which website you are on.**

◯ True ◯ False

4 **Which of these settings help you share less data?**

☐ Turning off ad personalisation ☐ Turning the screen brightness down

☐ Making your account private ☐ Switching on dark mode ☐ Deleting apps you no longer use

✎ **Which free app do you use most? What do you think it knows about you, and is the trade worth it?**

_____

_____

_____

Check your answers

Who else is watching?

Cyber security · Level 2 · Lesson 4

1 **Read the football news**

Reading is fine. A free network may be fake or watched, so don't sign in to anything important, your email included, and pay only on mobile data or a network you trust.

2 **The café's Wi-Fi owner — Sees which sites you visit**
HTTPS (the padlock) — Scrambles what you type and read
Private browsing — Saves no history on this phone
A tracker — Builds a profile of you for adverts

Each one protects or reveals something different.

3 **False**

HTTPS hides what you type and read, like your password, but the network can still see the site's name.

4 **Turning off ad personalisation; Making your account private; Deleting apps you no longer use**

Ad settings, a private account and deleting unused apps all cut what is collected or shown about you.
