Sort it into a table

Data engineering · Level 1 · Lesson 2

In this lesson you will

- Read a table: rows, columns and cells.
- Sort data into a table with headings.
- Fix a table so a computer counts it right.

Key ideas

- Rows go across, columns go down.
- Every column needs a heading.
- One fact in each cell.

Our garden table

1. Look (3 min): scraps of paper
2. Draw (5 min): rows and columns
3. Fill (4 min): one fact per cell
4. Find (3 min): the best day

Prepare the scraps of paper before the lesson, with made-up numbers.

Let’s discuss

1. Why is a table easier to read than scraps of paper?
2. What goes wrong with two facts in one cell?
3. How did we find the best day?

Exit ticket

- Draw a table with two rows and two columns, and label a row, a column and a cell.
