Data quality and project assessment

Data engineering · University · Lecture 4

In this lecture

- Name quality dimensions.
- Test and constrain data.
- Assess real-data projects.

Remember

- Test every load.
- Let constraints refuse.
- Grade the process.

Clean a real dataset

1. Warm-up (5 min): What went wrong?
2. Check (20 min): Three tests.
3. Constrain (15 min): Schema.
4. Defend (15 min): One decision.
5. Wrap-up (5 min): One-minute paper.

Let’s discuss

1. Which check found the most?
2. Which constraint was missing?
3. How will you grade the log?

Exit ticket

- Write one quality check for a table you use.
