Fitting a line

Data science · Level 3 · Lesson 1

Today we will

- Fit a line to a scatter plot.
- Read the slope and the start.
- Know where a line stops working.

Remember

- A line is a model.
- Slope: change per unit.
- Predict only inside the data.

A ruler line

1. Warm-up (5 min): Guess the arm span
2. Teach (8 min): The line, the slope, the start.
3. Plot (15 min): Height and arm span.
4. Predict (7 min): A new pupil.
5. Wrap-up (5 min): What did we find out?

Let’s discuss

1. What does the slope mean here?
2. Where would our line stop working?
3. Was the prediction close?

Exit ticket

- mark = 5 + 3 × hours. Predict the mark for 2 hours.
