Fair or unfair models

Data science · Level 4 · Lesson 3

In this lesson you will

- Find bias with error rates by group.
- Explain where bias starts.
- Plan checks before adopting a model.

Key ideas

- Averages hide bias.
- Bias starts in the data.
- Keep a person in the loop.

Fair for everyone?

1. Warm-up (5 min): Ninety percent right
2. Count (10 min): Error by group.
3. Fix (10 min): Make it fairer.
4. Wrap-up (5 min): What did you find out?

Let’s discuss

1. Which group had more errors?
2. Where does bias come from?
3. Who should check a model’s results?

Exit ticket

- Group A: 3 wrong in 20. Group B: 9 wrong in 20. Write both error rates.
