Best choices: review

Optimization · Level 1 · Unit check

In this unit

- What makes a choice the best?
- The shortest way
- Quick rules and their traps
- The best for whom?

The big ideas

- Every decision has options, limits and a goal; feasible isn’t yet optimal
- Add up the roads, and settle the nearest place first
- Quick rules are fast and often good: check and improve them
- Judge plans by the total, the worst-off and the gap, and agree rules with people

Decision detectives

1. Warm-up (5 min): Name a decision our school made this week.
2. Three parts (10 min): Groups write its options, limits and goal.
3. Quick rule (10 min): Try one quick rule and check the plan.
4. Fair? (10 min): Who is the plan hard on?
5. Share (5 min): Each group gives one improvement.

Use made-up names if a real decision is sensitive. The aim is to practise naming options, limits and goals, and asking who pays.

Let’s discuss

1. Which idea from this unit will you use first?
2. Which quick rule do we trust too much at our school?
3. When is a slightly lower score worth it for fairness?

Exit ticket

- One decision I will plan differently, and how.
