Transactions and distributed data

Data engineering · University · Lecture 3

In this lecture

- State the ACID guarantees.
- Recognise isolation anomalies.
- Argue CAP trade-offs.

Remember

- All or nothing.
- Know your isolation level.
- Partitions force a choice.

Interleave and fix

1. Warm-up (5 min): How did it happen?
2. Act (15 min): Two transactions.
3. Reproduce (20 min): Two terminals.
4. Argue (15 min): CAP.
5. Wrap-up (5 min): One-minute paper.

Let's discuss

1. Which interleavings were safe?
2. What is your default isolation level?
3. Which system chose availability?

Exit ticket

- Name one operation that must stay consistent during a partition.
